

Long Term Measures

- Select hardy plantings and grasses that are drought resistant.
- Investigate alternative watering solutions for athletic fields.
- Conduct awareness training for building representatives on water conservation measures that may be implemented in their building.
- Convert existing buildings to water saving fixtures either by attrition, as replacement is required, or at the time of renovation of the facility.
- Modify design guidelines to expand use of water conserving devices/fixtures.
- Investigate food preparation and dish washing for conservation opportunities.
- Recover higher levels of steam condensate by eliminating leaks/overflows.
- Modify design guidelines to expand use of drought resistant plantings.
- Meter water use by contractors on major building projects.
- Minimize the construction of paved surface areas to decrease storm water runoff.
- Exploring rainwater capture and reuse strategies at all capital improvement projects.
- Will explore feasibility of recycling irrigation water applied to sports field.
